Answering a call WebEx app window is in the foreground

When a call comes in, a small call window appears at the bottom right, which you can use to "Answer" the call.

If you want to call a contact via the name search in the TU Dresden telephone directory, select the menu item "Calling" in WebEx and click in the search field "Search or dial a number" above the number field. Enter the relevant name and the search results will be displayed directly in a list depending on your input. Click on the "handset icon" next to the desired contact to set up the call.

Screenshot CISCO WebEx: Start call name search Via the number entry in the search field

Select the "Calling" menu item in WebEx, click in the "Search or dial a number" search field above the number field and enter the desired number. You can also paste copied numbers from the clipboard. For internal calls, the five-digit number is sufficient; for external calls, please remember the "0" for the exchange and the dialling code. You can also dial internal and external numbers in E.164 format:

-
+4935146340000
-
+49172123456
-
+49301234567

Then click on the "handset icon" next to the entry in the search results list.

By clicking on the small symbol in the call menu above, you can access the usual dialpad and use it to enter phone numbers. Note the correct format (see above). The + for phone numbers in E.164 format is created by holding the button "0" for longer. To set up the call, click on the "handset icon" below the number field.
