Lösung (öffentlich)

Setting a scheduled downtime period can be useful for temporarily disabling notifications for specific services or entire hosts.

First, open the detailed view of a host. Activate the slider for "Show checkboxes" and select the desired services/checks. Then click on "Schedule downtimes":

In the following dialog, you must specify a description/comment for the downtime, as well as a time period. Finally, confirm your entry with "On service: Schedule downtime":

Further information concerning maintenance periods can be found in the official Checkmk documentation:
