### Schlüsselwörter

VPN eduVPN

### Lösung (öffentlich)

Connections to the following hosts/ports must be possible in order to use eduVPN. It may be necessary to allow these outgoing connections in firewalls.

```
disco.eduvpn.org tcp/443
idp.tu-dresden.de tcp/443
portals.vpn.tu-dresden.de tcp/443
nodes.vpn.tu-dresden.de udp/1194 tcp/1194 udp/51820
```

The IPs behind these DNS names can change at any time without further notice.

If the VPN connection is not possible via the standard ports listed above, it is automatically attempted to establish a VPN connection via the following alternative ports. Even this however cannot guarantee a successful VPN connection from highly restrictive networks.

```
nodes.vpn.tu-dresden.de udp/53 udp/443 tcp/443
```
