CheckMK Dienstüberwachung Monitoring

Lösung (öffentlich)

For various processes in CheckMK (e.g. the Windows agent set-up), it may be necessary to identify the unique hostname.

-

First, [1]access the CheckMK service.

-

Navigate to the "Monitor" tab in the left sidebar. In the search field, you can filter by your VM names (host aliases) or IP addresses. Please note that only hosts, for which you are configured as a contact, will be displayed here. Then click on your respective host.

Screenshot CheckMK: Search field

-

This will open the service view in which the host name is displayed at the top.

-

In addition, you now have the option of navigating to the status page of the corresponding host. To do this, click on "Host" in the upper selection area and then select "Status of Host".

Screenshot CheckMK: Menu "Host"

-

The hostname, the CheckMK site alias and more information is then visible on the host's status page.
