Backup - Installation - WindowsPrerequisites

You need administrator access to your Windows system.

Download and Installation

The installation files are provided as a direct download via the ZIH software server.

Download the package from the [1]software repository:

-

In the software repository, navigate to the folder of the latest version.

-

Download the package with the .exe extension, e.g.:
8.1.26.0-TIV-TSMBAC-WinX64.exe

-

Run the downloaded installation file.

-

A console window opens and the software is extracted. Once finished, a folder named TSMClient should appear next to the installation file.

-

Navigate to the TSMClient folder and run the file IBM Storage Protect Client.msi.

-

Confirm the installation menu all the way through with Next, Install, and finally Finish. All preselected options are correct.

Note: All following instructions assume that you keep the default options in the installation menu. If you choose a different installation location, for example, you must take this into account in all following instructions.
