Lösung (öffentlich)

To export passwords from Passwork, you must have the necessary permissions for the respective vault. If you are the owner of the vault, you are automatically authorized. On shared vaults, multiple people may have permission to export the data.

Exporting data:

1. Click on “Vault”
2. Click the three-dot menu in the upper-right corner next to "Add password"
3. Select "Export data"

Screenshot Passwork: Vault Settings

4. You will now be prompted to enter your master password; you must then confirm this entry.

Screenshot Passwork: Enter Master Password

5. A list of all vaults for which you have at least read access will appear. You can now select which vaults and the folders they contain you want to export, or use the multi-select option in the upper-left, next to "Vaults and Folders", to select all vaults and folders. Only the passwords from the vaults for which you have the appropriate permission to export data will be exported. You can choose between JSON and CSV formats; CSV is the better choice for importing the data into KeePass and Vaultwarden.
After confirming by clicking "Export," the download will start automatically, and a confirmation message will appear in Passwork.

PLEASE NOTE:

To ensure that Vaultwarden can process the newly created export.CSV file more effectively, two additional steps are required:

-

Open the export.CSV file (in your Downloads folder)

-

In the first line, change “login” to “username”

-

Save the file
