AnyConnect VPN Windows Windows10 Setup

Lösung (öffentlich)

First, download the current Cisco AnyConnect software from website [1]Download Cisco AnyConnect Client-Software. You will find it below the table under the red marked link "AnyConnect for Windows (Version XY)".

-

Start the installation as described on the download page. The setup wizard for the installation will be executed. Please click on "Next" first.

Establishing a connection

- Please start AnyConnect from the Windows program menu. Please enter the URL of the VPN gateway in the "VPN:" field: "vpn2.zih.tu-dresden.de". After that, please click on "Connect".

Screenshot AnyConnect Secure Mobility Client - Connect

- In the field "Username:" please enter your "ZIH-Login@tu-dresden.de". If you want to use a license server, please enter your VPN group or your ZIH-Login. In the field "Password:" please enter your ZIH-Login password.

Screenshot AnyConnect Secure Mobility Client login credentials

- In the "Group:" field, you can specify which connections should be made over the VPN. You have the following options:

- A-Tunnel-TU-Networks - Connections to all networks of TU Dresden (public and private IP addresses) via VPN (recommended)
- B-Tunnel-Public-TU-Networks - Connections to networks of TU Dresden with public IP addresses via VPN. Use this group, if you have problems due to overlapping private IP address space.
- C-Tunnel-All-Networks - All connections (also to destinations outside of TU networks) via VPN. If all you need is a TU Dresden IP address to access online resources, consider using [2]OpenVPN instead.
- TUD-vpn-lic - Only connections to license servers (e.g. Mathcad) via VPN. Use only ZIH login name without the @-part (e.g. s1234567) in the Username field.
- Other groups (Z-*, TUD-vpn-*) - These groups are for special users/requirements only, use them only if instructed to do so.

After that, please click "OK":
