DavMail Exchange Thunderbird Setup Windows macOS Linux Calendar

Solution (public)

Add calendars of other users If shared calendars are to be added, it is necessary to assign a permission of at least "Folder visible", individually, descending from the mailbox root. This must be done by the owner, individually for each user.

For adding a calendar the link must be entered in the following form, separately for each calendar:

[https://davmail.msx.tu-dresden.de:1180/users/\[zih-login_of_calendarowner@tu-dresden.de\]/calendar/](https://davmail.msx.tu-dresden.de:1180/users/[zih-login_of_calendarowner@tu-dresden.de]/calendar/)

Access to sub-calendars via Thunderbird is currently only possible via DavMail:

[https://davmail.msx.tu-dresden.de:1180/users/\[zih-login_of_calendarowner\]/calendar/subcalendar/](https://davmail.msx.tu-dresden.de:1180/users/[zih-login_of_calendarowner]/calendar/subcalendar/)

Add your own calendar

-

Open the calendar view in Thunderbird and click on the + icon by the calendar list.

Screenshot "add new calendar"

-

Select "On the network" and click on "Next".

Screenshot selection of the calendar location

-

Enter user\zih-login for username and the following address (make sure that you change your ZIH login in the address and do not simply copy the link).

<https://davmail.msx.tu-dresden.de:1180/users/zih-login/Kalender>

Then click on "Find calendars".

Screenshot calendar creation

-

Now enter the password of your ZIH login and confirm this with "Sign in".

Screenshot password request

-

Now select the calendars you want to add and press "Subscribe".

Screenshot calendar selection

-

You can now see your calendars in Thunderbird.
